**SMITHSONIAN
HERPETOLOGICAL
INFORMATION
SERVICE**

The SHIS series publishes and distributes translations, bibliographies, indices, and similar items judged useful to individuals interested in the biology of amphibians and reptiles, but unlikely to be published in the normal technical journals. Single copies are distributed free to interested individuals. Libraries, herpetological associations, and research laboratories are invited to exchange their publications with the Division of Amphibians and Reptiles.

We wish to encourage individuals to share their bibliographies, translations, etc. with other herpetologists through the SHIS series. If you have such items please contact George Zug for instructions on preparation and submission. Contributors receive 50 free copies.

Please address all requests for copies and inquiries to George Zug, Division of Amphibians and Reptiles, National Museum of Natural History, Smithsonian Institution, Washington DC 20560 USA. Please include a self-addressed mailing label with requests.

INTRODUCTION

This bibliography and index to the *Occasional Papers of the Natural History Museum, The University of Kansas*, number 1-180 1971-1996) cover all the publications concerning herpetology.

All the junior authors are listed alphabetically and cross referenced to the senior author. All articles in this bibliography can be located by knowing the author (s) or the title.

The present bibliography is numbered according to the number assigned by the publisher, and can be found either in the authors index, or list of publications by number and author. All citations in the index refer to publication number, which is easily found by checking the list of publications on page 8 and 9, and then referring to the author index.

All herpetological scientific names are listed alphabetically and referenced to the article (s) where they are mentioned. All original spelling have been maintained and new scientific names are highlighted, as are the page number for which the new taxa is described.

I am grateful to Dr. William E. Duellman and Beth Huerter for providing support and input for this project.
